

REST API ASSIGNMENT

OBJECTIVE: Develop a **REST API** that enables administrators to:

- Add new employees.
- View all employees.
- Search employees by ID.
- Update employee information.
- Delete employees.

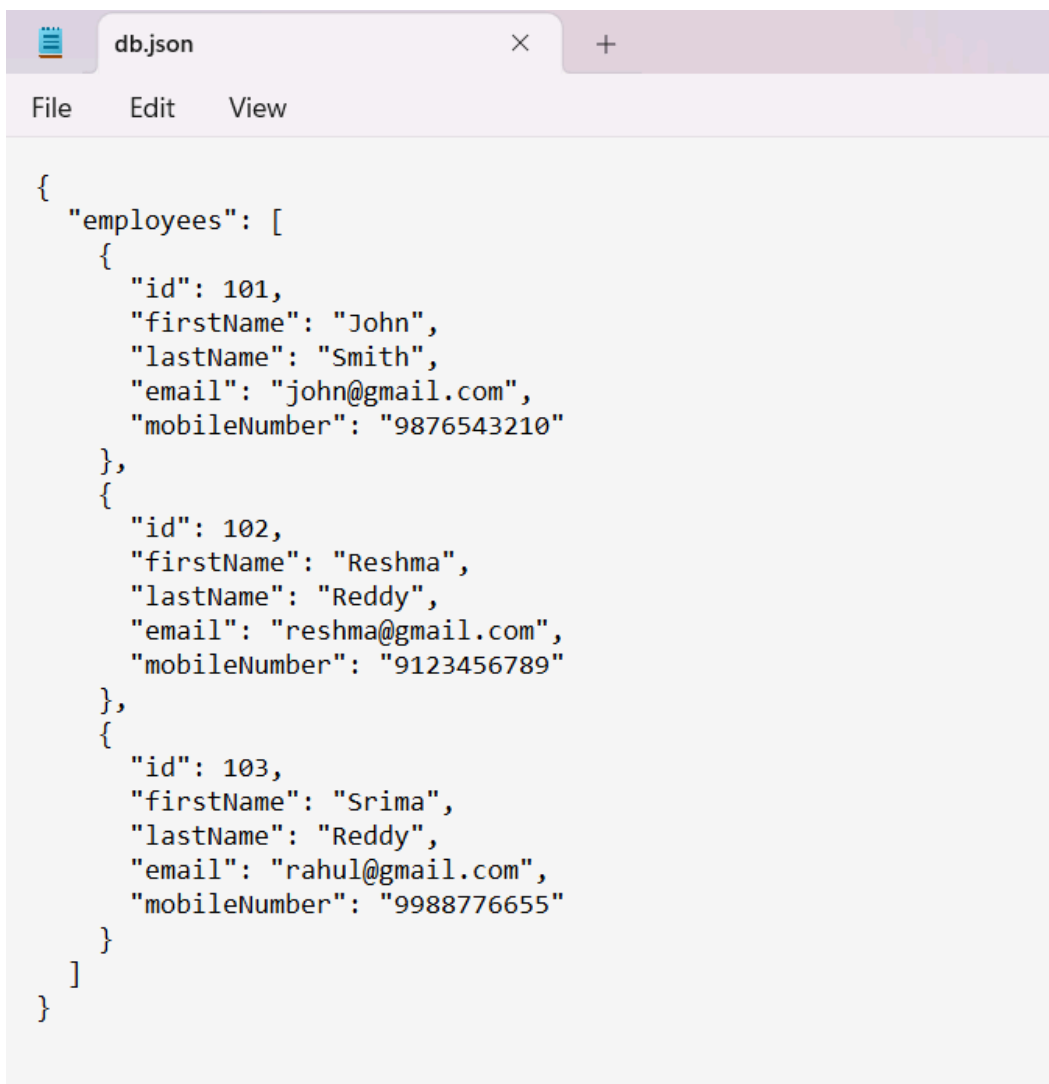

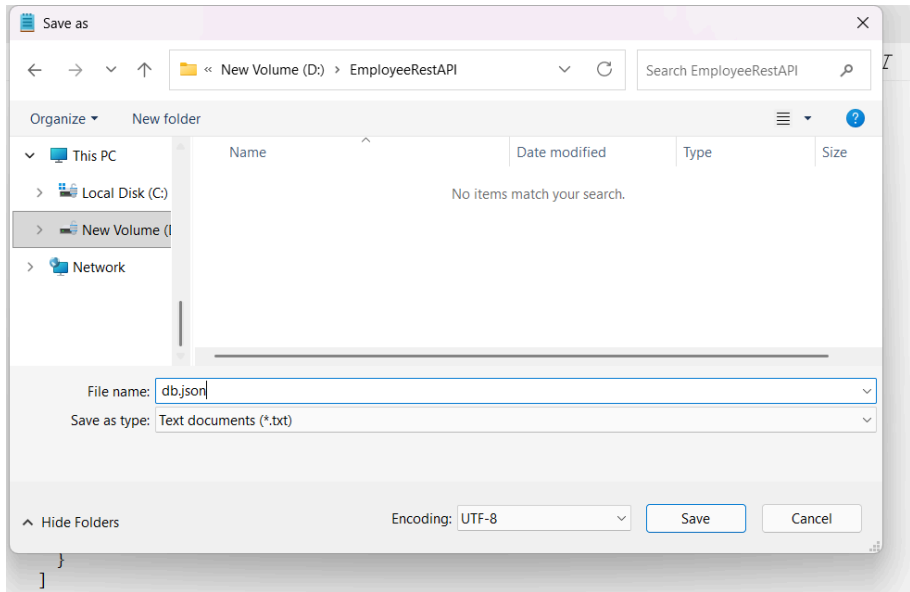

Step 1:

Create a folder “EmployeeRestAPI” in D-drive.

Step2:

Create a db.json file in the folder and add the employee details module.

Step 3:

Open folder in command prompt:

```
C:\Windows\System32\cmd.e  X  +  v

Microsoft Windows [Version 10.0.26200.8655]
(c) Microsoft Corporation. All rights reserved.

D:\EmployeeRestAPI>
```

Step 4:

Run JSON Server on port 3000.

Use: json-server --watch db.json --port 3000

```
C:\WINDOWS\system32\cmd.  X  +  v

Microsoft Windows [Version 10.0.26200.8655]
(c) Microsoft Corporation. All rights reserved.

D:\EmployeeRestAPI>json-server --watch db.json --port 3000
--watch/-w can be omitted, JSON Server 1+ watches for file changes by default
JSON Server started on PORT :3000
Press CTRL-C to stop
Watching db.json...

♡\(-> ~ <-),♡

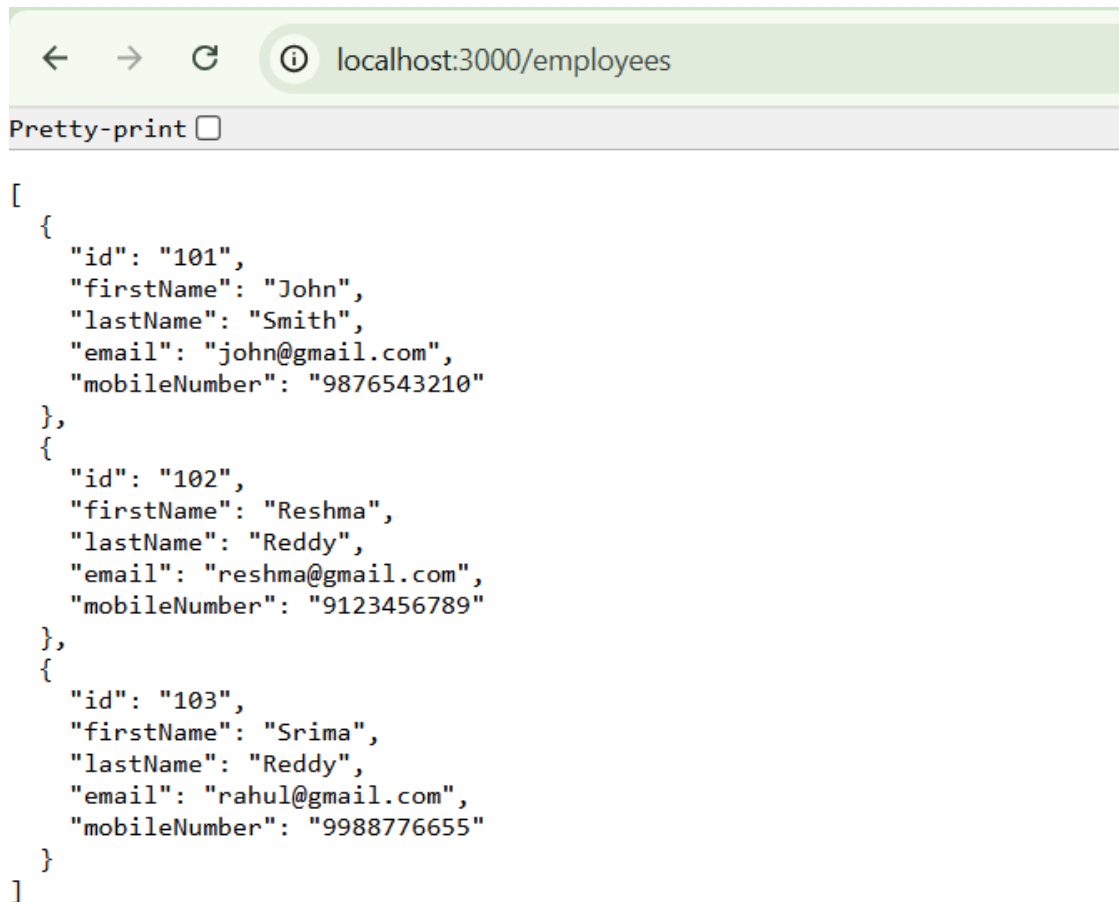

Index:
http://localhost:3000/

Static files:
Serving ./public directory if it exists

Endpoints:
http://localhost:3000/employees
```

Step 5:

Copy the url and open it in the browser.

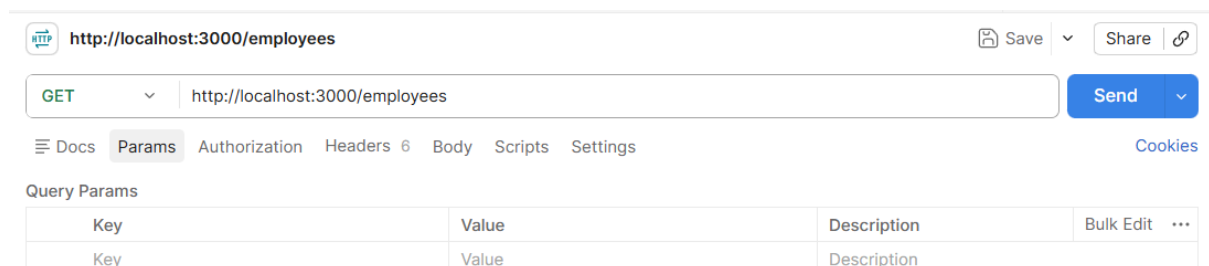

Step 6: TEST IN POSTMAN.

A. GET All Employees

Go to postman: select “GET” from dropdown and copy past url in url tab and click on “SEND”.

It displays the details.

```
Body Cookies Headers 9 Test Results
{ } JSON Preview Visualize
1  [
2    {
3      "id": "101",
4      "firstName": "John",
5      "lastName": "Smith",
6      "email": "john@gmail.com",
7      "mobileNumber": "9876543210"
8    },
9    {
10     "id": "102",
11     "firstName": "Reshma",
12     "lastName": "Reddy",
13     "email": "reshma@gmail.com",
14     "mobileNumber": "9123456789"
15   },
16   {
17     "id": "103",
18     "firstName": "Srima",
19     "lastName": "Reddy",
20     "email": "rahul@gmail.com",
21     "mobileNumber": "9988776655"
22   }
23 ]
```

B. GET Employee By ID

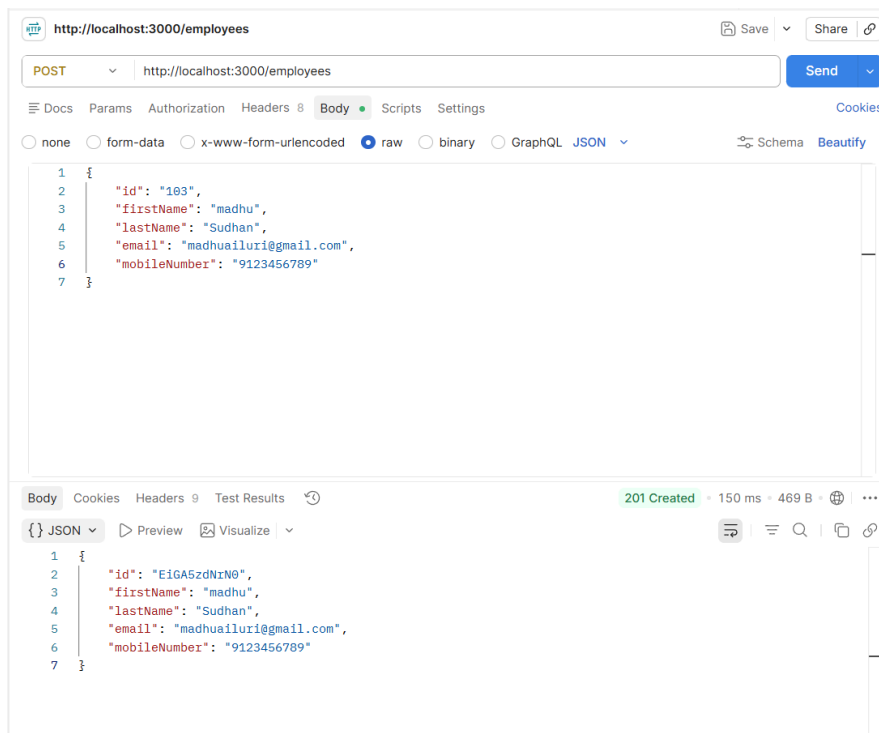

To get Employee by ID:

Select "GET" -> ADD employee id at the end of url ->SEND

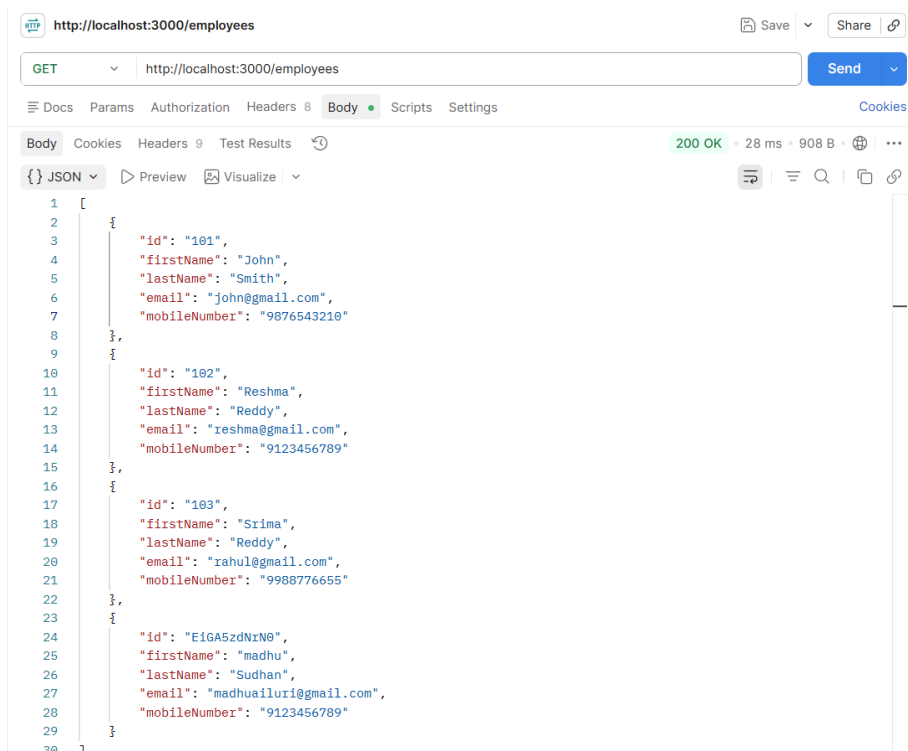

```
http://localhost:3000/employees/103 Save Share
GET http://localhost:3000/employees/103 Send
Docs Params Authorization Headers 8 Body Scripts Settings Cookies
Body Cookies Headers 9 Test Results 200 OK • 30 ms • 449 B • ...
{ } JSON Preview Visualize
1  {
2    "id": "103",
3    "firstName": "Srima",
4    "lastName": "Reddy",
5    "email": "rahul@gmail.com",
6    "mobileNumber": "9988776655"
7  }
```

C. To create a NEW Employee - use POST

Select POST->paste url in url tab -> copy “employee data which you want to update” ->body->raw->JSON->details get created.

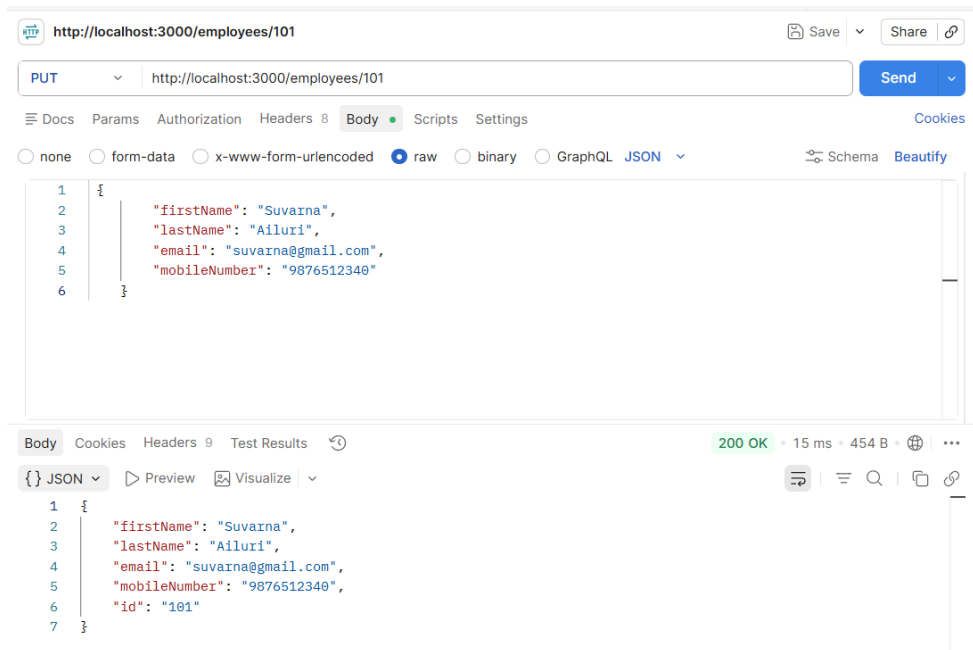

Verify using “GET”

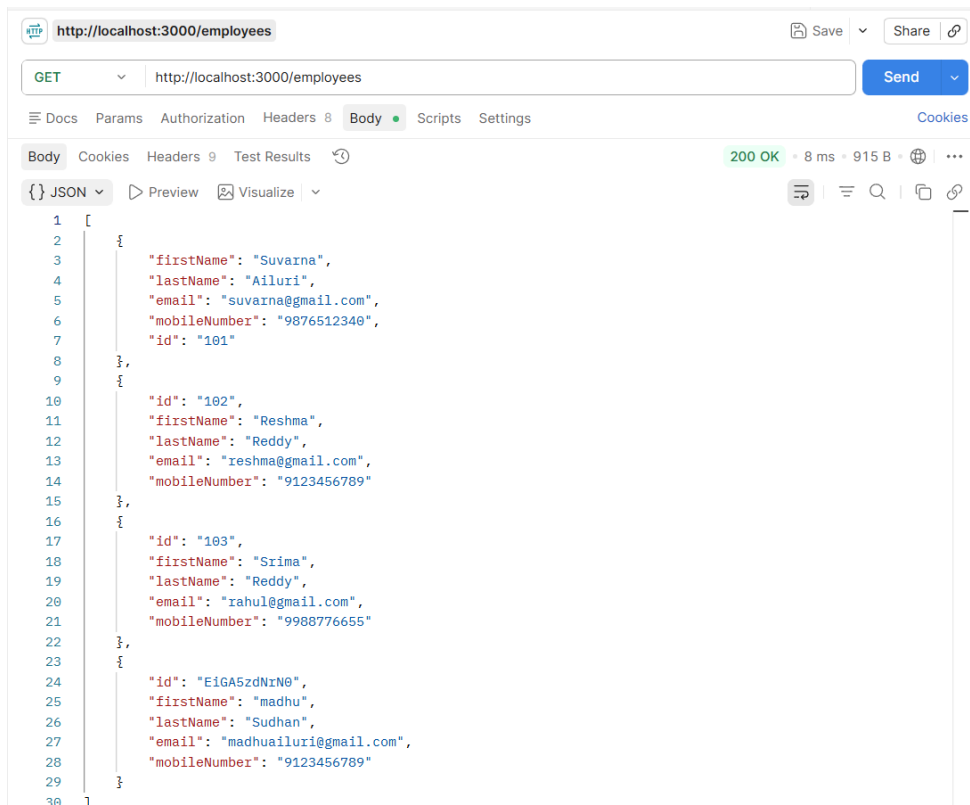

D. To UPDATE ENTIRE EMPLOYEE - USE PUT.

Add employee id at the end of url -> select PUT -> BODY-> RAW-> copy paste all details you want to update except id -> Send.

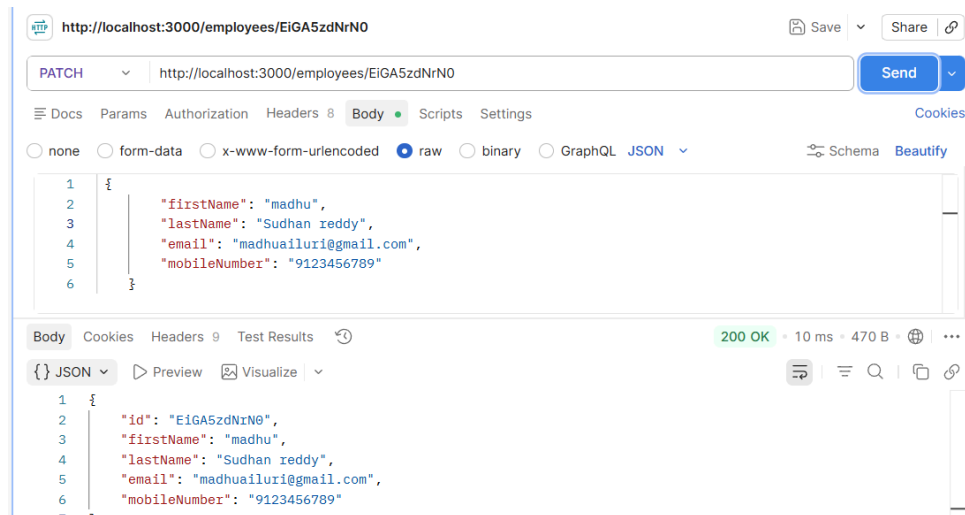

Verify using “GET”

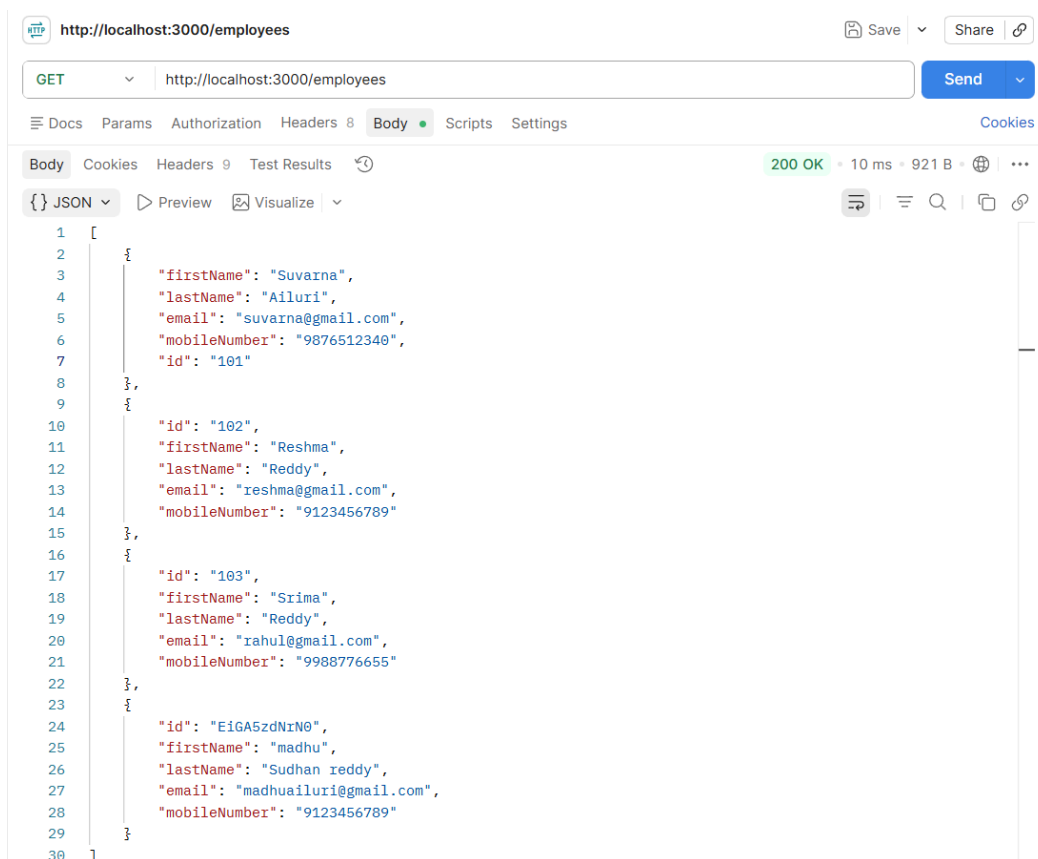

E. To UPDATE ONLY ONE FIELD -use PATCH

It is the same as put, but don't update all details, only update some.

Add employee id at the end of url -> select PATCH -> BODY-> RAW-> copy paste all details you want to update except id -> Send.

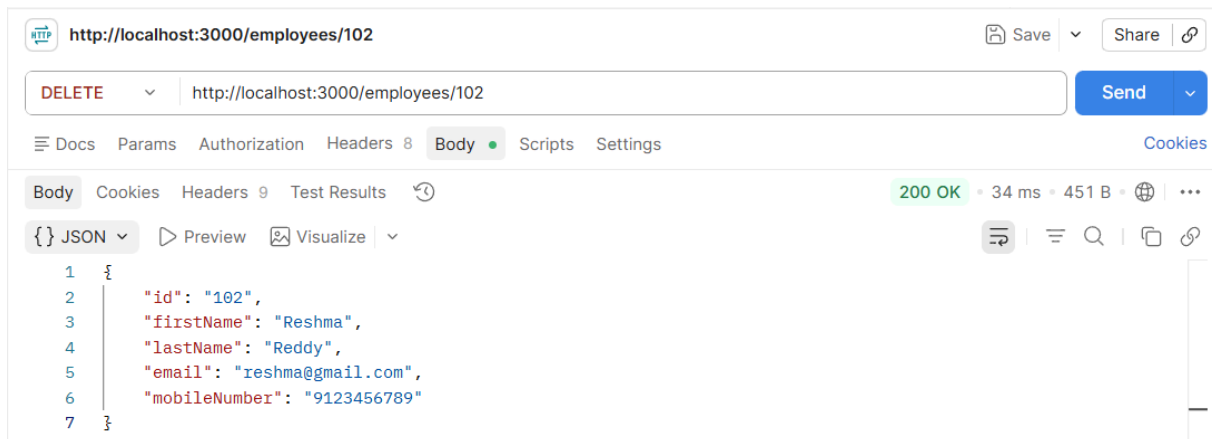

VERIFY USING "GET"

F. To DELETE Employee Details:

USING PRIMARY KEY:

SELECT DELETE -> Add employee id at the end of url(ex:/101)->SEND.

VERIFY USING “GET”
